

## **1. Reflection from the Industrial Talk**

- **What I learned from Clarity Techworks Employees**

I learned a lot about the roles played by Mohamad Noor Ridwan, Syarifah Adilatul Hulwani, Liyana Amri, Saiful Habib Danial, and Izzah Fatini of Clarity Techworks Sdn Bhd from the industrial talk, which was an invaluable source of information. The conversation covered their individual job responsibilities, the resources they use, and the fundamental abilities needed to succeed in their positions.

In addition to their comprehension of the technical aspects, the employees of Clarity Techworks provided insightful viewpoints on the differences between student and professional life. They emphasised significant distinctions in areas like dedication and self-reliance, providing a realistic picture of what to anticipate during the move from school to the workforce.

Employees of Clarity Techworks provided insightful advice during the discussion, suggesting that software be regularly created and uploaded on GitHub. This is an intelligent idea that not only helps to create a vibrant portfolio but also encourages community involvement and increases one's visibility in the field.

## **2. Suggestions for Enhancement**

A special section exploring artificial intelligence (AI) integration would be very helpful in improving the industrial talk. Employees at Clarity Techworks can provide useful tips for keeping up with AI developments and exchange tactics and resources to stay ahead of this quickly developing field. Furthermore, talking about the value of AI skills in different industry roles could help students make sense of how technology and their desired career paths intersect.

## **3. Conclusion and Future Aspirations**

To sum up, the industrial talk gave me a lot of knowledge, motivation, and insights. With this newfound knowledge as a guide, I will be able to effectively adjust to the demands and expectations of my future workplace. Motivated by the talk, I'm determined to work harder and make an effort to stand out as a candidate to prospective employers, using the knowledge I've gained as a boost to my career development.
